1. SPECIFICATIONS

PHONO MOTOR AND TURNTABLE

Motor	DC servo motor
Speed	Two speeds: 33-1/3 rpm, 45 rpm
Wow and flutter	0.05% (WRMS) or less
S/N	58dB or more (in case of using Pioneer cartridge model PC-50)
Turntable platter	31cm diam, Aluminum-diecast alloy

TO NEARM

Tonearm type	Static balance, S-shape, pipe arm
Effective arm length	221mm
Tracking error	+3° ~ -1°
Overhang	15.5mm
Usable cartridge weight	4g (min) ~ 14g (max)

SUBFUNCTIONS

- Large-size shock absorbers
- Anti-skating force control
- Lateral balance weight
- Oil-damping arm elevator
- Hinges (Free-adjustable)
- Speed fine adjusters (33-1/3rpm, 45rpm: for use in turntable speed adjustment with stroboscope and strobolight)

OTHERS

Power requirements	AC. 120V, 60Hz
Power consumption	5.2W (max)
Outer dimensions	480(W) x 410(D) x 185(H)mm 18-7/8(W) x 16-1/8(D) x 7-1/4(H) in.
Weight	11.5 kg, 26 lb

ACCESSORY GROUP

Overhang adjustment gauge	1
45 rpm adaptor	1
Weight plate (Cartridge weight-adjustable)	1
Head shell	1
Sub weight	1
Screwdriver	1
Output cord (Connection cord)	1
Cartridge mounting screws	10
Cartridge mounting nuts	2
Cartridge mounting washers	2
Operating instructions	1

NOTE: Specifications and the design subject to possible modification without notice due to improvements.

2. OPERATION

STROBOSCOPE and STROBOLIGHT

The proper part of the stroboscope band to read depend upon the power source and record speed as below.

33-1/3 RPM BUTTON

Push this button for playing a 33-1/3 rpm speed record.

45 RPM BUTTON

Push this button for playing a 45 rpm speed record.

FUNCTION LEVER

This three-stage lever turns the motor on and off, and raises and lowers the tonearm.

- OFF Position
Shuts off power the motor, Stopping platter rotation.
- ON-UP Position
Switched from OFF this position causes the platter to begin moving and switch on the strobolight.
Switched from DOWN it raises the tonearm so that the stylus leaves the record surface smoothly.
- DOWN Position
When you are ready to begin record play move the lever to this position and stylus will lower gently onto the record.

SPEED SELECT

SPEED CONTROL KNOBS

With either of the speed selectors pressed, watch the appropriate stroboscope band and strobolight. Adjust for precise speed (so that the band appears to stand still) by turning that speed control knobs. Turn toward + (clockwise) for faster speed, toward - (counterclockwise) for slower. When the stroboscope appears to stand still, the speed is correct.

SPEED CONTROL

3. PRINCIPLE OF MOTOR OPERATION

Construction of motor control for the PL-51A is depicted in Fig. 2.

1. Applying power sets the oscillator into operation. Output of this circuit passes to the pole position detecting circuit (L1~L6).
2. Here, assume that coupling between L1 and L4 is the tightest. Voltage induced in L4 is rectified and applied to Q106/Q109 in the driver.
3. Q109 in turn conducts and causes current to flow in the associated drive coil (A-1). The rotor moves in the direction shown by arrow in Fig. 1. The magnetic pole affixed to the rotor induces a voltage proportional to rotor movement, in the sensing coil (A-4).
4. Voltage induced in A-4 is rectified by a diode in the speed sensor and applied to Q103 in the control stage. This point is also fed from the reference voltage generator (voltage E_s) through a fine speed control pot.
5. Voltage applied to the base of Q103 in the control stage controls current that flows in Q104.
6. Q104 serves as a constant current source for Q106 through Q111 in the driver and therefore controls current flow in the drive coils.
7. When ambient temperature change causes driver current to rise, the speed of rotation increases above the rated value. Q104 current increases and Q106~Q111 currents decrease. As a result, the speed of rotation falls off.

Pole Position Detector

Fig. 1 shows a simplified view of the drive and sense coils. With power applied and coupling between L1 and L4 high, Q109 causes current to flow through A-1. As a result, the rotor end of coil A-1 becomes a south pole (S1) and attracts N1. The rotor moves in the direction shown by arrow. Coupling factor between L2 and L5 increases and operation of Q110 causes current to flow in coil A-2. Pole S2 attracts pole N2 and rotor rotation continues. In the same manner, S3 attracts Pole N3. Continuation of this process causes the rotor to turn on a steady basis.

Fig. 1

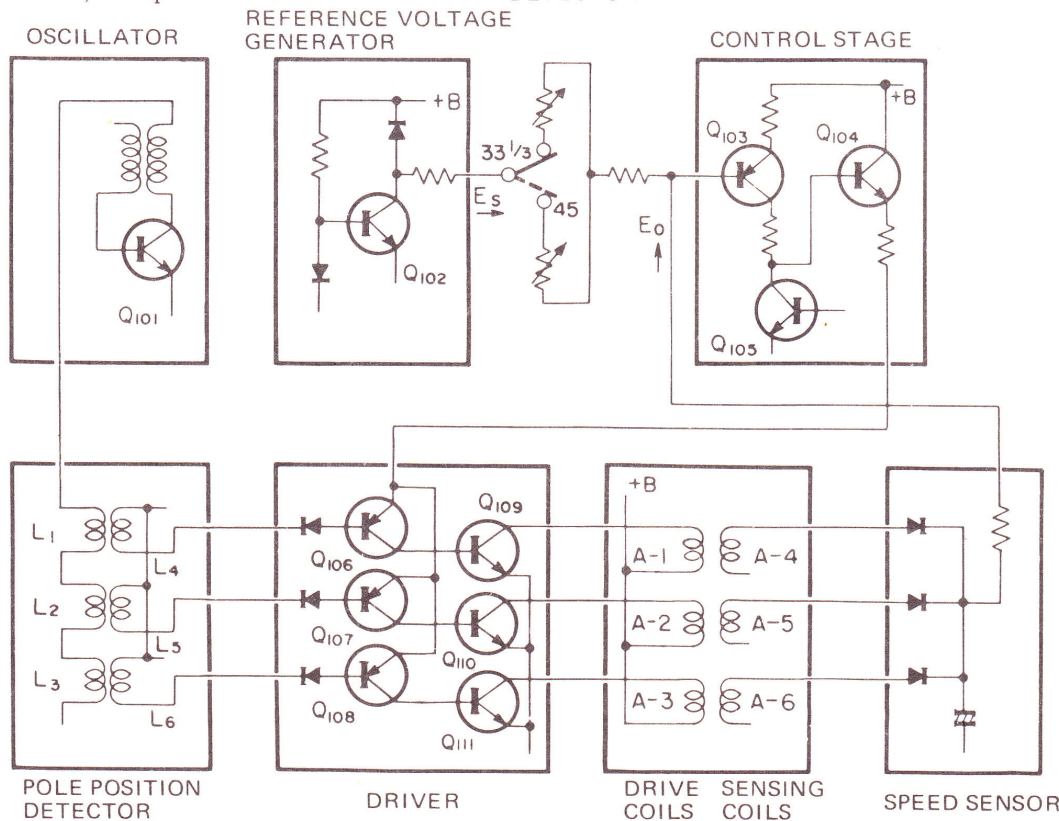

Fig. 2

4. ADJUSTMENT

When adjustment of the fine speed control does not give a satisfactory speed, adjust the motor in accordance with the following procedure.

1. Remove the bottom cover.
2. Set the fine speed control to the midposition.
3. While observing the edge of the turntable platter with a strobe, adjust screws inside the motor as shown in Fig. 3.
4. Alternate switching between 33-1/3 and 45 rpm speeds while making adjustment. Make sure that both speeds are correct.

Fig. 3

Selection of Line Voltage

If model PL-51 does not agree with the line voltage of your service area, set the unit to the proper line voltage as follows:

1. Remove the bottom cover, now you can see the terminal board (Fig. 4).
2. Unsolder the lead (White) from the terminal.
3. Solder the lead (White) to the terminal of your local line voltage.

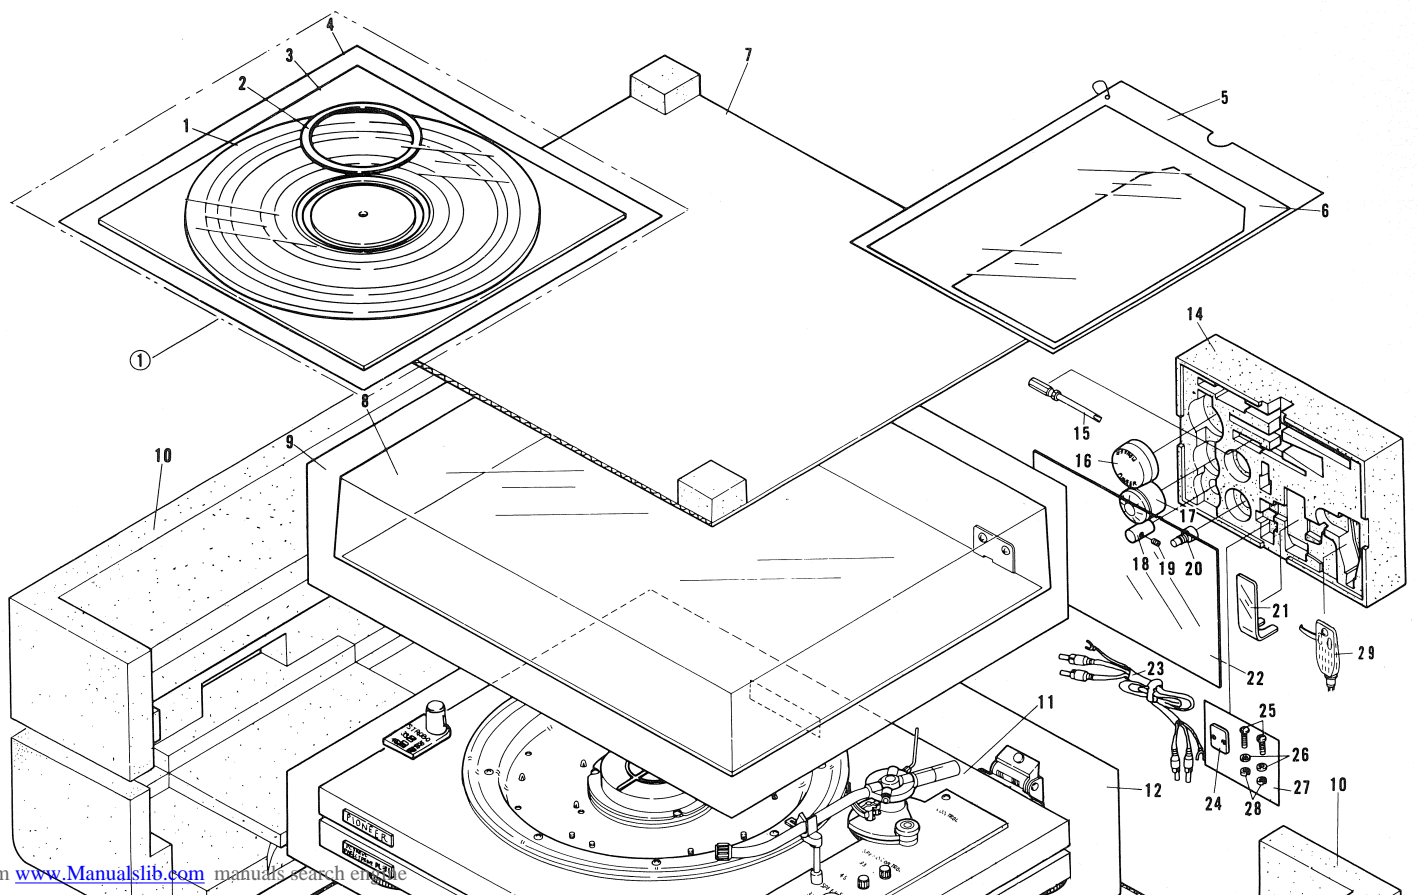

Fig. 4

5. EXPLODED VIEWS AND PARTS LIST

5.1 PACKING

NOTICE: Any parts asterisked(*) are subject to being not supplied.

Key No.	Description	Part No.	
1	Rubber mat	KEB-058-0	
2	Rubber mat ring	KAH-007-A	
3	Card board	H52-632-0	
4*	Rubber mat bag 345 x 395 x 0.05(t)mm		
5*	Vinyl bag	E11-024-0	
6	Operating instructions	KRB-064-A	
7	Top packing	KHC-059-0	
8	Dust cover	KNK-266-A	
9*	Dust cover bag 700 x 650 x 0.05(t)mm		
10	Styrotector (A)	KHA-226-B	
10-1	Styrotector (B)	KHA-227-A	
11*	Unit (PL-51)		
12	Vinyl cover	H56-603-0	
13			
14	Furnished parts box	KHX-026-B	
15	Screwdriver	KEX-002-A	
16	EP adaptor	KNK-055-B	
17	Main weight assembly	KXA-566-A	
18	Lateral balance weight	KXA-420-B	Attached 19
19	Set screw M4 x 5		
20	Subweight A	KLA-131-0	
21	Overhang checker	KNK-290-0	
22	Parts Box cover	KHX-027-0	
23	Connection cables	PDE-004-A	
24	Weight plate	N64-698-A	
25	Screw (13mm)	B11-044-C	
	(11.5mm)	B11-657-0	
	(8mm)	KBA-043-0	
	(5mm)	KBA-044-0	
	(15mm)	KBA-045-0	
26	Washer	B23-642-0	
27*	Vinyl bag 50 x 70 x 0.03(t)mm		
28	Nut	B71-653-A	
29*	Head Shell		
30	Turntable platter	KNH-108-0	
31*	Vinyl bag 345 x 395 x 0.05(t)mm		
32	Packing case	PHG-034-0	
33	Packing stopper	KHK-403-0	
①*	Rubber mat assembly	KEA-019-0	

The following symbols stand for screws, nuts, washers, etc.
as shown in EXPLODED VIEW on pp. 9-10.

- N nut
- FW flat washer
- SW spring washer
- E E-type washer
- T Tapping screw

Parts List of Mechanism

NOTES:

- Sems A: Screw and spring washer
- Sems B: Screw, spring washer and flat washer
- Sems F: Screw and flat washer

NOTICE: Any parts asterisked (*) are subject to being not supplied.
